

## Find the Maiden Name

For each woman on the google spreadsheet, find her maiden name and attach a source that confirms that information. Lots of sources will provide this information include a birth, marriage, or death record. In addition, the birth, marriage, or death records of the woman's children will often provide this information as well, especially in states like Ohio and Texas.

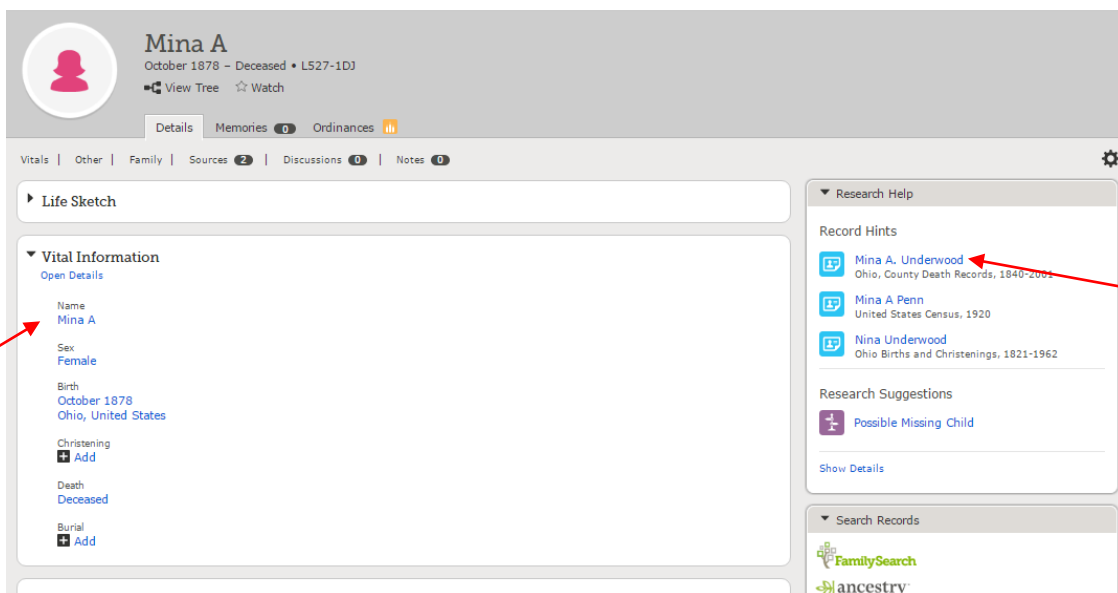

Step 1: Find the person on FamilySearch using the id on the google spreadsheet.

FamilySearch search results for ID L527-1D3. The search bar shows the ID number and the 'Find' button is highlighted with a red arrow. The results table shows the following information:

Name	Events	Relationships
Mina A L527-1D3	birth: October 1878, Ohio, United States	spouse: William Penn L52W-7MK

Step 2: Check record hints first since there might be a record that will be helpful. You can also use the search records options to search for other records on on FamilySearch or Ancestry.com. Also, click on the person's children and look for sources for them that provide their mother's maiden name.

FamilySearch person page for Mina A. L527-1D3. The page shows the person's name, birth date (October 1878), and death date (Deceased). The 'Vital Information' section is highlighted with a red arrow. The 'Record Hints' section shows a hint for 'Mina A. Underwood' from Ohio, County Death Records, 1840-2004, which is also highlighted with a red arrow.

Step 3: Change the woman's maiden name by clicking on her name and then clicking "edit".

Step 4: Put your name under volunteer when you start to work on a group of people to reserve the part you will be working on and then put a "1" in the result column once you find the death date or a "0" if you are unable to find it. In some cases, the maiden name will have already been added to the person and just put a "1" in that case.

Feel free to add or edit the information on the tree based on the sources that you find. The ultimate goal of this project is to help complete the US portion to the tree so any information you add to the tree will be helpful
